

### PRODUCT INFO

**T-clamp mountings TG** are made of drawn aluminum profiles and have a slitted clamping point machined by cutting methods.

The clamping point bore is T-shaped relative to the bolt and to the bore on the opposite side. It receives rods and tubes with round or square cross-sections via the additionally incorporated square bore.

T-clamp mountings of type W are suitable alternatives to swivel cross clamp mountings DGK if higher retaining torques are required.

For clamping, a stainless steel socket cap screw DIN 912-A2-70 combined with the clamping thread reduces the cross-section of the clamping point bore. For regular tool-free clamping, adjustable hand lever sets are available as accessories under the designation HK.

**RoHS-compliant product**
